Ex.No.-1.1-Design and Draft the given 2D Sketches in Modelling Software.

AIM:

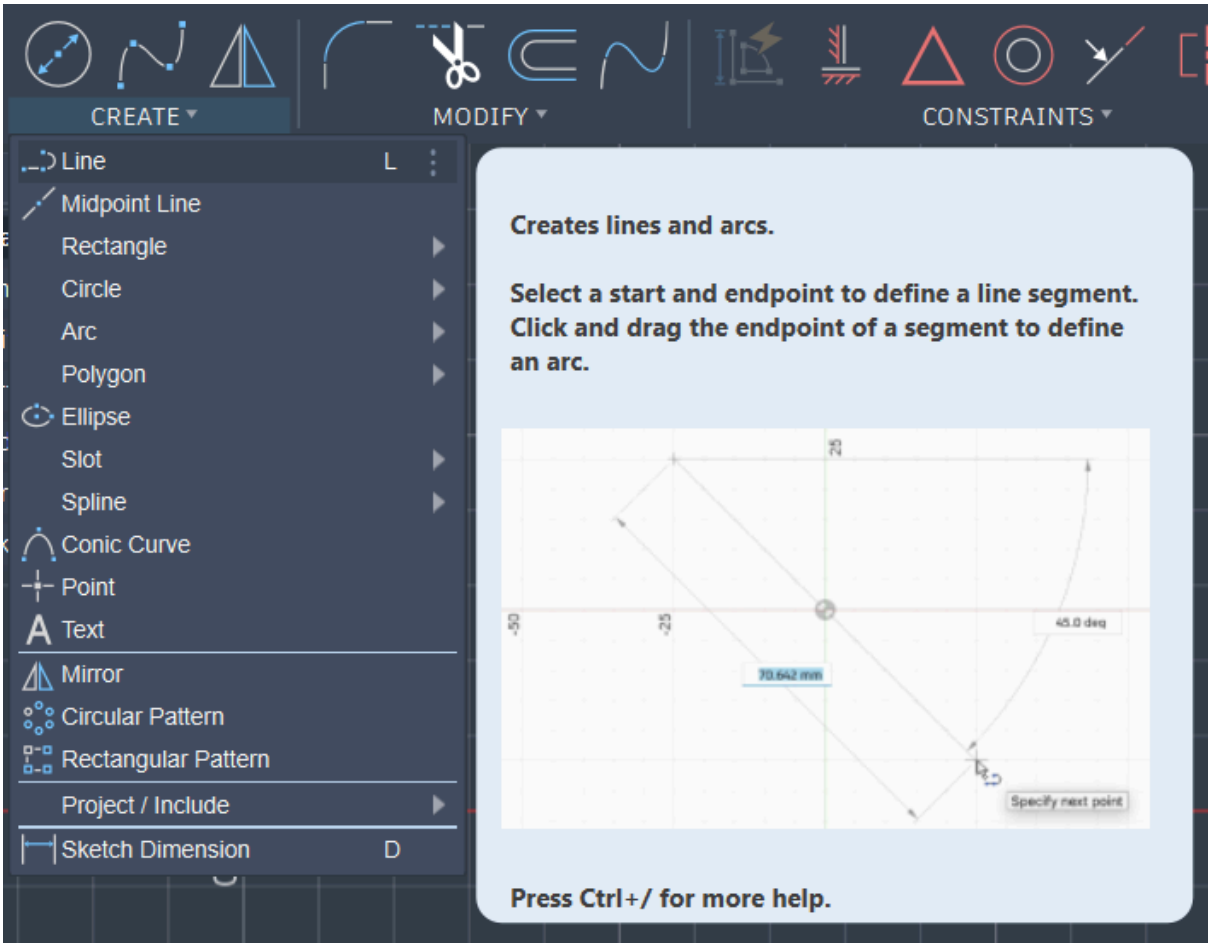

To sketch the given drawing with dimensions using fusion 360 tool.

REQUIREMENTS:

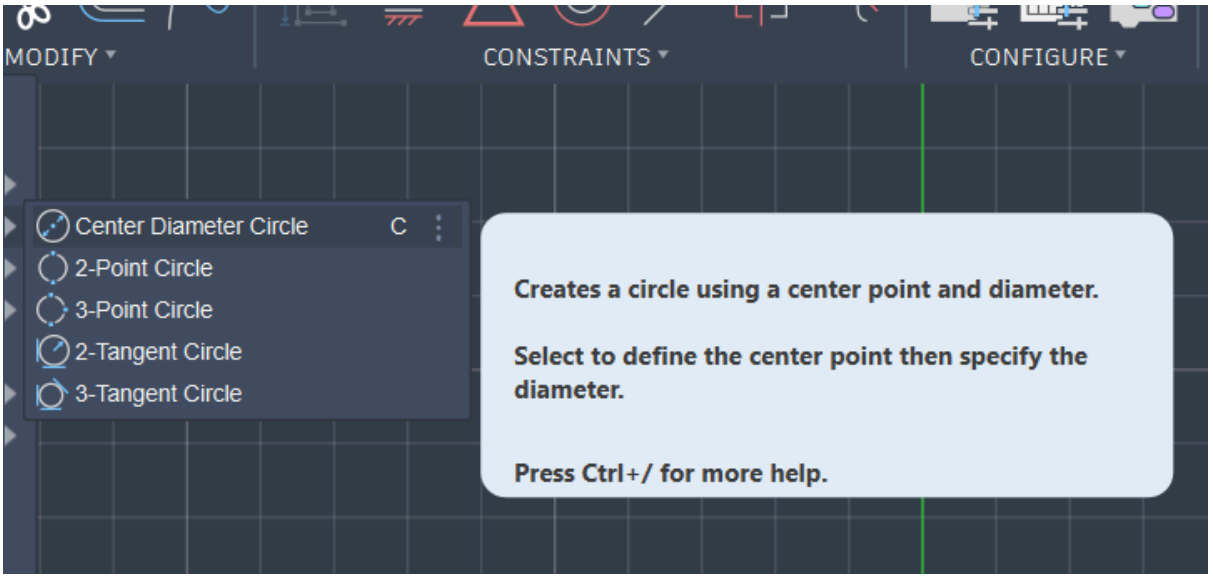

1.Autodesk fusion 360.
2.Windows 10.
3.16 GB of RAM (integrated graphics recommend 2 GB or more).
4.2.5 Mbps or faster download; 500 Kbps or faster upload.

PROCEDURE:

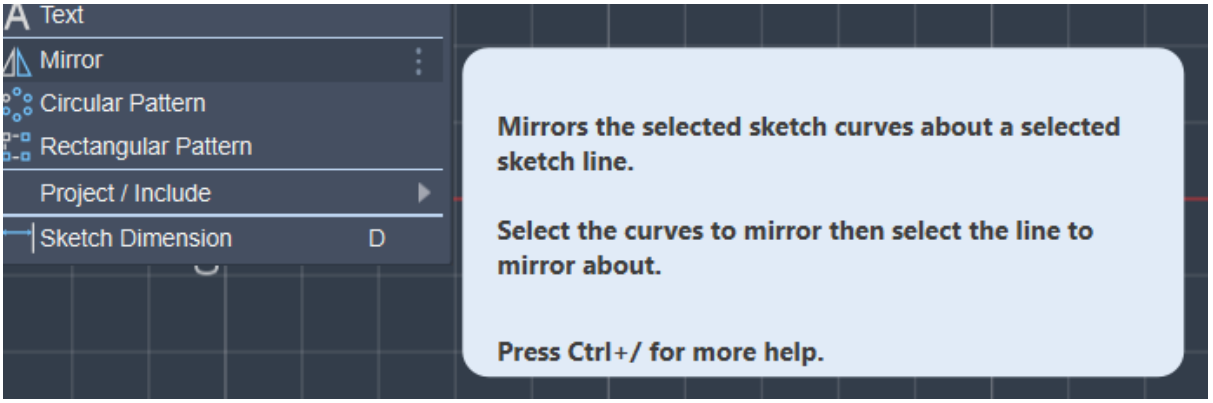

1.First open your Autodesk fusion 360.
2.Select the new part design.
3.Open a new file and select the sketch icon.
4.select the plane for sketch in front view.
5.select the line for drawing.
6.Draw a 50mm line in the plane with using a sketch creations.

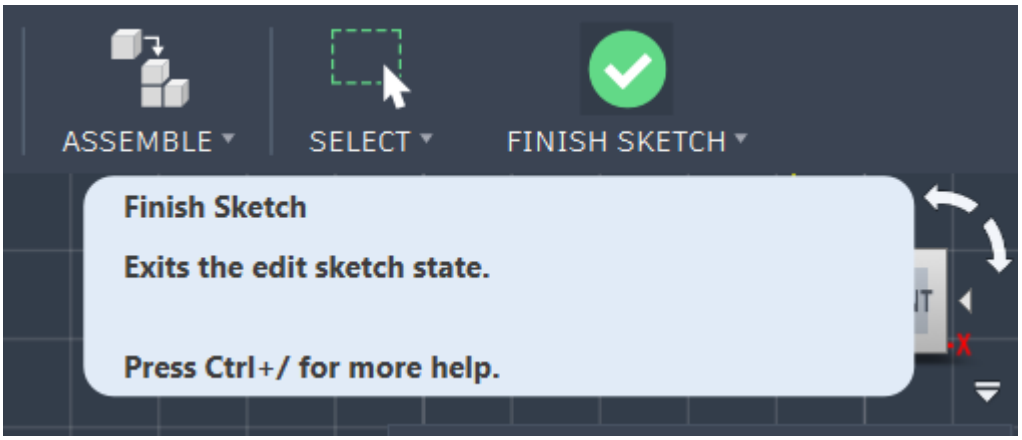

7.Draw a 65mm line from the origin and then draw 26mm line from the origin.draw a 24mm line from the end of the 26mm line.
8.Draw a circle of Diameter in 40mm.

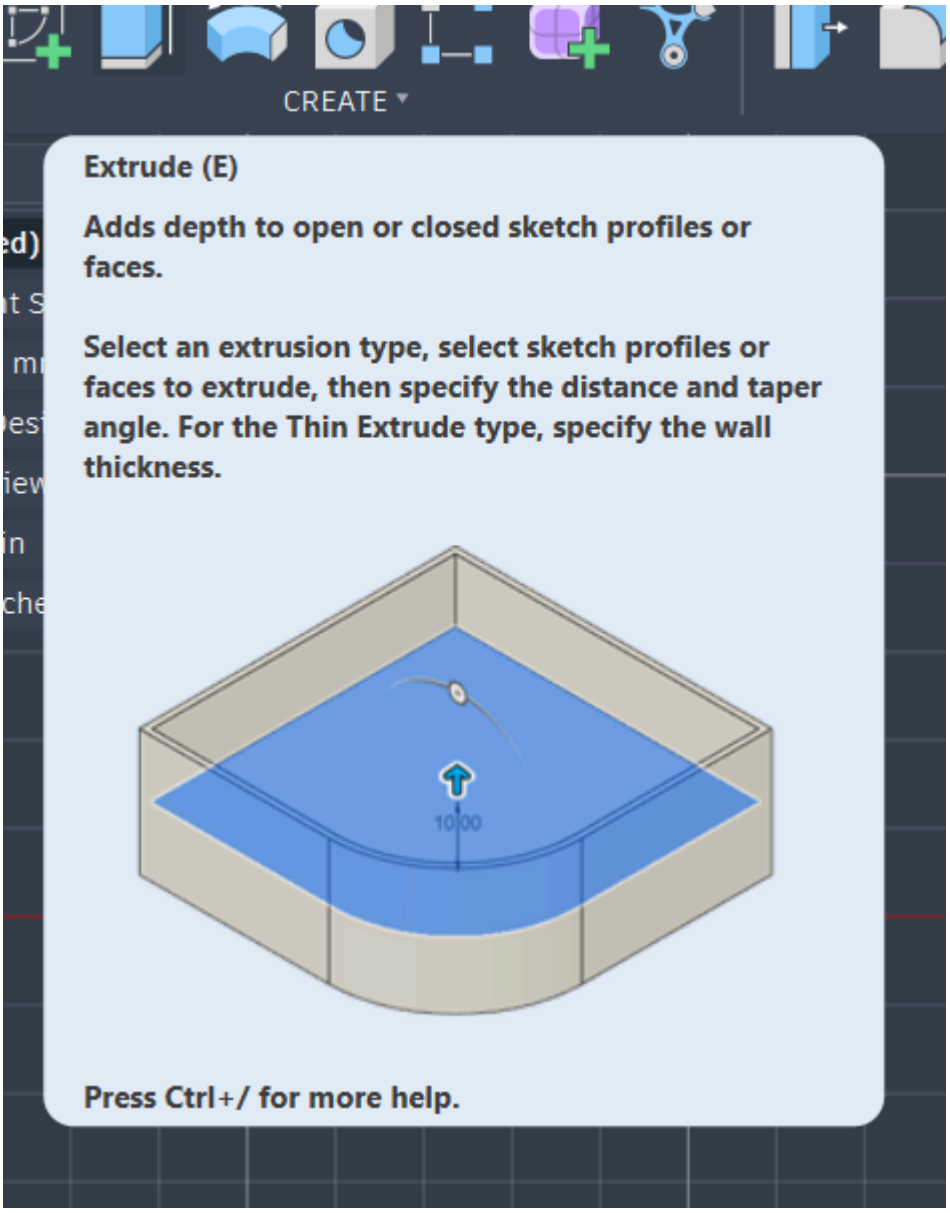

9.Draw a circle of Diameter 10mm below the origin.
10.Draw a Diameter of 32mm and 20mm on the diameter 65mm above the origin.
11.Draw a concentric circle of radius 7mm and 10mm apart from the y-axis and 26mm apart from the x-axis.
12. Draw a circle of radius 64mm.
13.Using the tangent option and tangent the 64mm radius circle with 66mm diameter circle using tangent with diameter of 32mm circle and tangent with 32mm diameter circle.
14.draw a 20mm radius of the circle and tangent with 66mm diameter circle 10mm radius circle.
15.draw a 10mm radius of the circle and tangent with 66mm diameter of the circle and 20mm diameter in this circle.
16.Use mirror option to mirror it to other.click the mirror option and then select the objects and select the center line to mirror it.

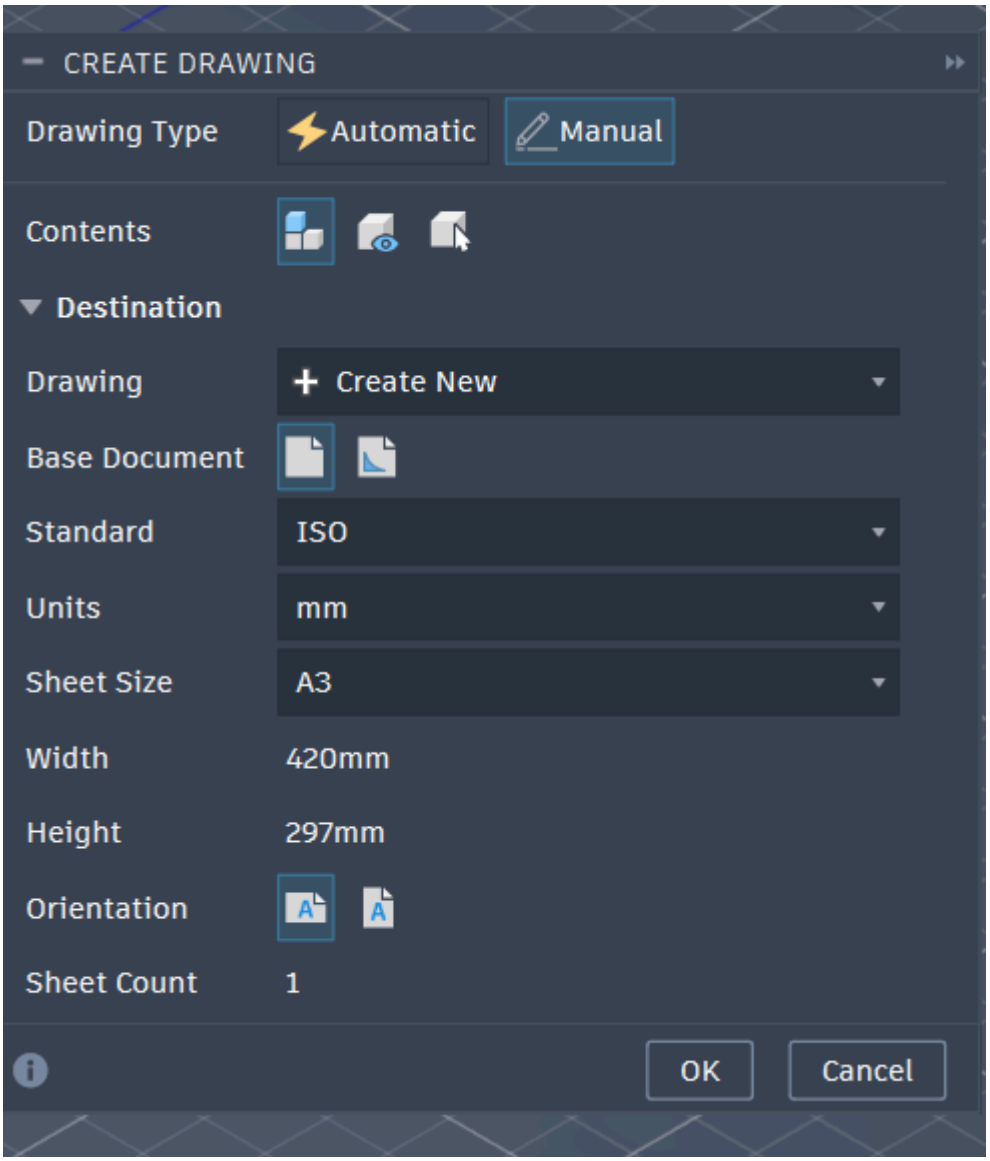

17.Then select the finish sketch option.

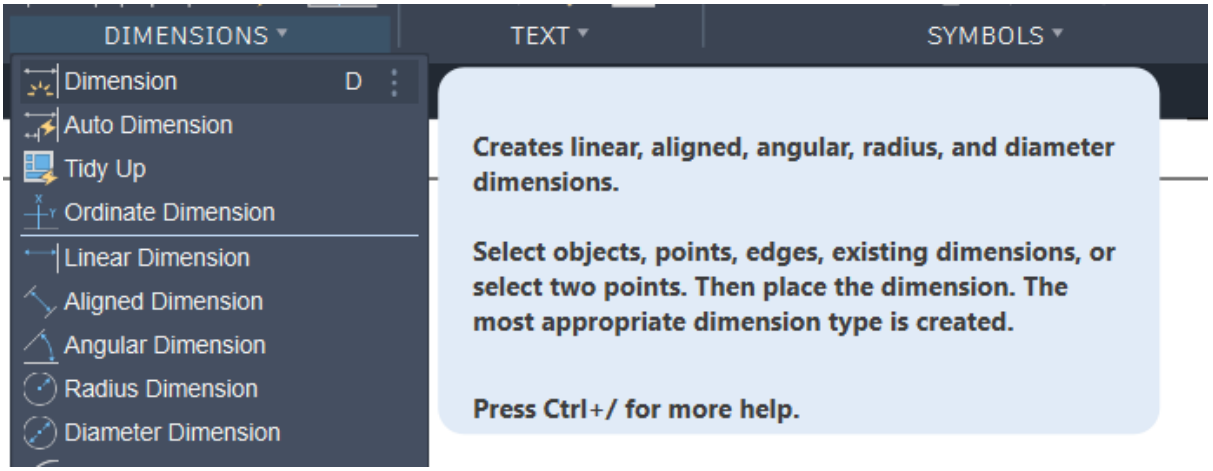

17.select the extrude and then give the distance as 20.

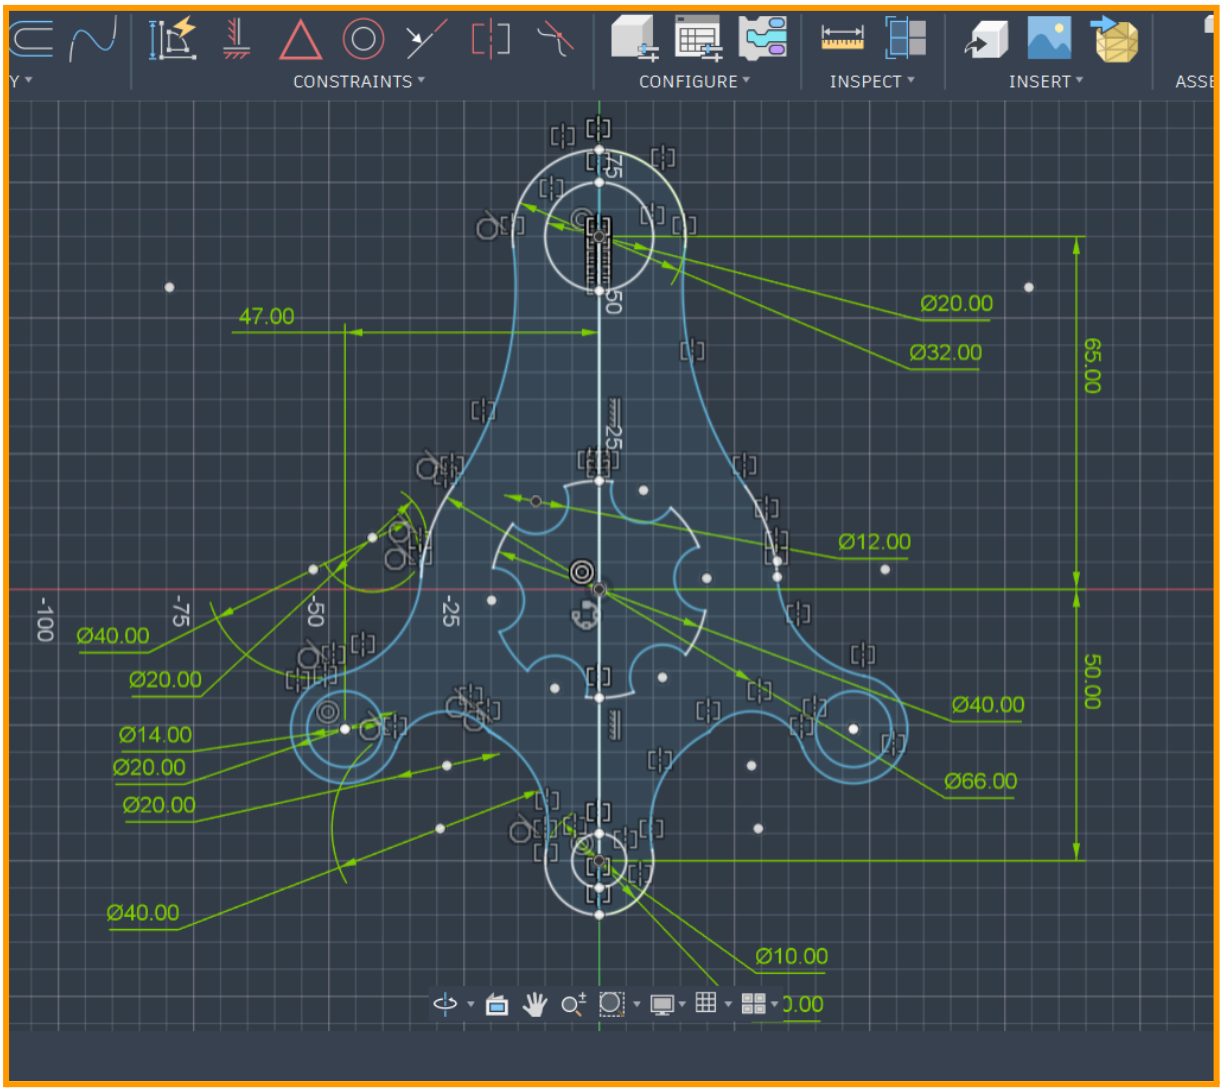

18.After extrude this drawing mode switch into the ISO mode.

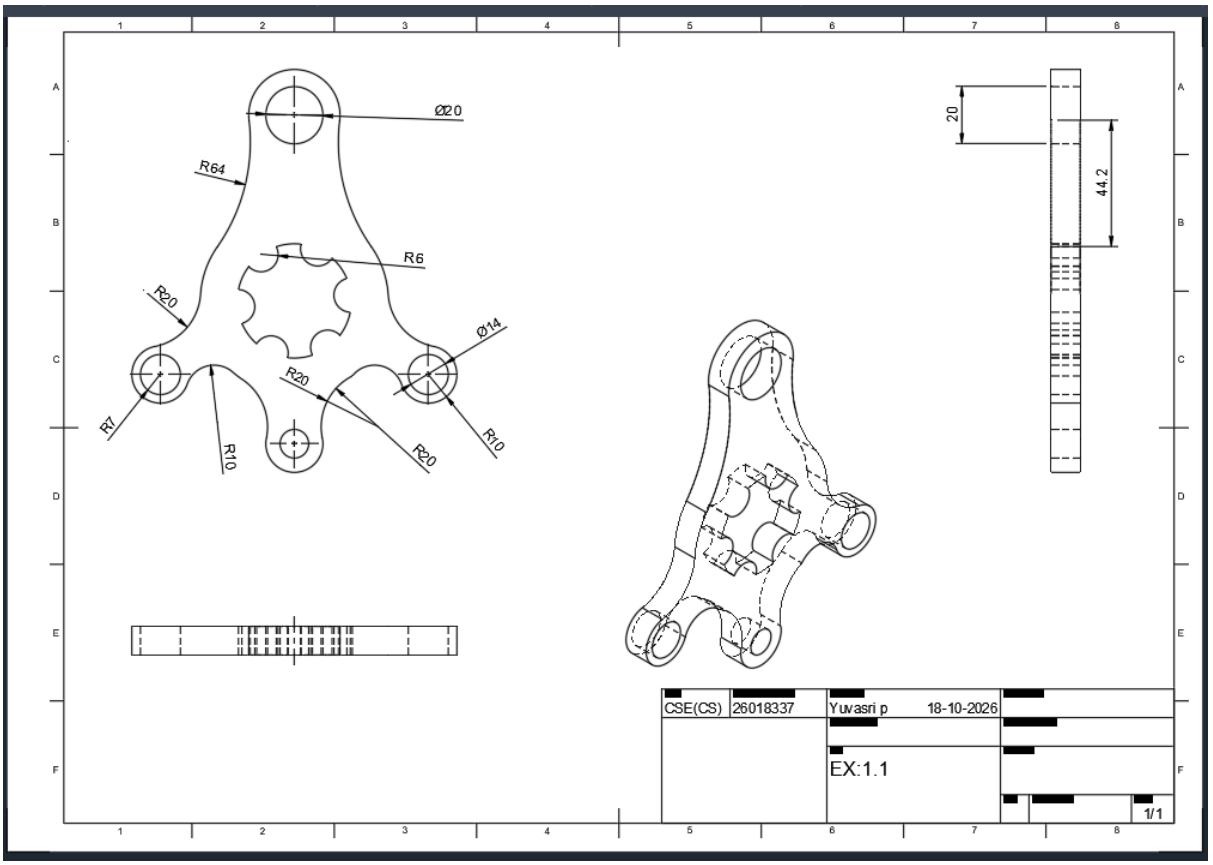

19.Place the object in the center and mark the linear , radius, and diameter using their respective dimensions.
